

## CLAIMS

1. A polarizing plate protective film comprising a base film and a low-refractive-index layer formed on the base film, the low-refractive-index layer including a metal oxide complex and inorganic microparticles and having a refractive index of 1.25 to 1.37, the metal oxide complex being formed from at least one compound selected from the group consisting of a compound shown by the following formula (1):  $MX_n$  (wherein M represents a metal atom or a semimetal atom, X represents a halogen atom, a monovalent hydrocarbon group which may have a substituent, an oxygen atom, an organic acid radical, a  $\beta$ -diketonate group, an inorganic acid radical, an alkoxy group, or a hydroxyl group, and n represents the valence of M, provided that, when n is 2 or more, the Xs may be the same or different), a partial hydrolysate of at least one compound shown by the formula (1), and a complete hydrolysate of at least one compound shown by the formula (1), and having an  $-(O-M)_m-O-$  bond (wherein M is the same as defined above, and m represents a positive integer) in the molecule.

2. The polarizing plate protective film according to claim 1, wherein the inorganic microparticle is a hollow microparticle of an inorganic compound.

20

3. The polarizing plate protective film according to claim 1 or 2, wherein M is Si.

4. The polarizing plate protective film according to any of claims 1 to 3, comprising a hard coating layer between the base film and the low-refractive-index layer.

25

5. The polarizing plate protective film according to claim 4, wherein the hard coating layer includes an activated energy ray-curable resin or a heat-curable resin.

6. The polarizing plate protective film according to claim 4, wherein the hard  
5 coating layer has a refractive index of 1.53 or more.

7. The polarizing plate protective film according to claim 4, wherein the hard coating layer further includes conductive microparticles.

10 8. The polarizing plate protective film according to any of claims 1 to 7, wherein the base film includes an alicyclic structure-containing polymer resin.

9. A reflection preventive polarizing plate comprising the polarizing plate protective film according to any of claims 1 to 7 as an observation-side protective film  
15 for the polarizing plate.

10. An optical product comprising the reflection preventive polarizing plate according to claim 9.
